

Eels In The River?

**We catch them,
You count them!**

The **European eel** (*Anguilla Anguilla*) is critically endangered. Recruitment of young eels back into European rivers has rapidly declined over the last 30 years.

ZSL and Thames21 has been monitoring the migration of eels into the Thames and its tributaries since 2005 and we need help to:

- check eel traps (located near Bow Lock)
- Count and measure the eels present
- Upload data on the ZSL website

Monitoring runs from April to Sept, at the end you will be invited to the 2016 Eel Forum at the London Zoo.
